Legal Statement

This product is not intended for or supported for use in pharmaceutical or medical applications requiring compliance with EU or US Pharmacopeia.

Processing Statement

- HS is lap sealable to other acrylic-coated and sealable PVdC-coated films.
- HS is not recommended as the sealant webs on VFFS machines because of poor hot tack.
- Acrylic coating and its properties can be affected by extreme humidity and water condensation. Thorough testing is recommended when considering acrylic-coated films in refrigerated or frozen applications.
- Acrylic coating must be primed if used in extrusion lamination.
- Acrylicrylic is an excellent surface for water-based or solvent-based inks, adhesives, and code-dating (cold wet or hot stamp) without treatment.
- To avoid blocking, ghosting, high residual solvents, or decreased sealability, converters should eliminate the use of slow solvents (cellosolve, glycol ethers, MIBK, butanol, etc) when printing on acrylic surfaces. The use of esters should be minimized.

Storage

You will find all information about storage conditions into the sign in area of our website<http://www.jindalfilms.com/login-register-docmg/> , under the section "Information on food safety and quality practices". The name of the document is "Storage recommendations".
