

Metallyte™ MM688 and MM648 films

Replace laminates in high-speed HFFS packaging applications

Benefits

- outstanding packaging performance for high- and variable-speed HFFS applications
- moisture, flavor and aroma barriers keep products tasting and smelling fresh
- structure simplification due to excellent single film properties
- high gloss and brilliant metal appearance for product promotion and shelf-appeal
- ease of conversion due to protection of metal by a printable coating

Metallyte™ MM688 and MM648 films are recommended for monoweb applications and can be printed on the acrylic surface.

Protection

- good flavor and aroma barrier to keep products tasting and smelling fresh, and prevent unwanted external odor or pack-to-pack contamination
- the protected metal surface provides moisture barrier to extend product shelf-life

Performance

- very low temperature seal (VLTS) coating enables high HFFS speeds for excellent packaging line performance
- low minimum seal temperature (MST) provides a broad operating window for robust packaging performance on variable-speed packaging equipment

Promotion

- high gloss, metal brilliance and good film stiffness provide excellent brand visibility on the store shelf
- combine outside metal appearance with white (MM648) or metal (MM688) inside look

Metallyte™ MM688 and MM648 biaxially oriented polypropylene (OPP) films feature Jindal Films' very low temperature seal (VLTS) coating, which delivers outstanding performance in demanding high- and variable-speed horizontal form fill and seal (HFFS) packaging applications. A printable, overcoated metallized surface on the opposite side enables consistent machinability, excellent graphics and barrier to moisture, flavors and aromas. Even better, this performance and protection come in a single film, so lamination is no longer required in order to achieve the desired moisture barrier and product protection. This allows producers to lightweight their packaging while maintaining product shelf life and enabling further distribution.

MM688 (clear) and MM648 (white) films are ideal for:

- high-speed packaging lines
- HFFS packaging lines where accurate heat control is a problem
- HFFS packaging lines where dwell times vary due to frequent machine speed changes
- smaller pack formats

Metallyte™ MM688 and 648 films deliver excellent performance, protection and promotional opportunities for food and non-food packaging applications, including:

- biscuits, baked goods, crackers and snack bars
- sweet and chocolate confections
- household, health, beauty aid products

Count on Jindal Films

Jindal Films is a leading global OPP films supplier with the broadest range of metallized films for the flexible packaging market. If you're looking to develop innovative flexible packaging solutions, try Metallyte™ films from Jindal Films.
